Contents of Volume 39

NUMBER 1, JULY 1974

Full Papers

LESTER G. BARTH AND LUCENA J. BARTH. Ionic Regulation of Embryonic Induction and Cell Differentiation in <i>Rana Pipiens</i>	1
COLLIN MURPHY. Cell Death and Autonomous Gene Action in Lethals Affecting Imaginal Discs in <i>Drosophila melanogaster</i>	23
EDGAR ZWILLING. Effects of Contact between Mutant (Wingless) Limb Buds and Those of Genetically Normal Chick Embryos: Confirmation of a Hypothesis.....	37
A. CHEDID AND V. NAIR. Ontogenesis of Cytoplasmic Organelles in Rat Hepatocytes and the Effects of Prenatal Phenobarbital on Endoplasmic Reticulum Development.....	49
TOSHIO YAMAUCHI AND E. GOLDBERG. Asynchronous Expression of Glucose-6-Phosphate Dehydrogenase in Splake Trout Embryos.....	63
JEFFREY A. MACCABE, JANICE ERRICK, AND JOHN W. SAUNDERS, JR. Ectodermal Control of the Dorsoventral Axis in the Leg Bud of the Chick Embryo.....	69
S. R. DIENSTMAN, J. BIEHL, S. HOLTZER, AND H. HOLTZER. Myogenic and Chondrogenic Lineages in Developing Limb Buds Grown <i>in Vitro</i>	83
FRANCES A. MCHENRY, PAUL N. HOFFMAN, AND MIRIAM M. SALPETER. Uptake of ³⁵ S-Sulfate by Morphologically Differentiated Replicating Chondrocytes <i>in Vivo</i> : A Double Isotope Electron Microscope Autoradiographic Study.....	96
JAMES D. YAGER, JR. AND NORMAN W. KLEIN. Protein Nitrogen and DNA Accumulation in Early Chick Embryos Cultured on Several Purified Yolk Proteins..	105
DANTON H. O'DAY AND PAUL A. HORGAN. The Developmental Patterns of Lysosomal Enzyme Activities during Ca ²⁺ -Induced Sporangium Formation in <i>Achlya bisexualis</i> . I. Acid Phosphatase.....	116
J. B. GURDON, H. R. WOODLAND, AND J. B. LINGREL. The Translation of Mammalian Globin mRNA Injected into Fertilized Eggs of <i>Xenopus laevis</i> . I. Message Stability in Development.....	125
H. R. WOODLAND, J. B. GORDON, AND J. B. LINGREL. The Translation of Mammalian Globin mRNA Injected into Fertilized Eggs of <i>Xenopus laevis</i> . II. The Distribution of Globin Synthesis in Different Tissues.....	134
MICHAEL ASHBURNER. Sequential gene Activation by Ecdysone in Polytene Chromosomes of <i>Drosophila melanogaster</i> . II. The Effects of Inhibitors of Protein Synthesis.....	141

Brief Notes

SHIGEMASA OSAKI, GORDON T. JAMES, AND EARL FRIEDEN. Iron Metabolism of Bullfrog Tadpoles during Metamorphosis.....	158
M. A. CRAYTON, E. WILSON, AND R. S. QUATRANO. Sulfation of Fucoidan in <i>Fucus</i> Embryos. II. Separation from Initiation of Polar Growth.....	164
GERALD GREENHOUSE AND JAMES H. MORRISSEY. Resolution of Acid-Soluble Protein Component of Yolk Platelets from <i>Xenopus laevis</i> Eggs on Polyacrylamide Gels.....	168

HELEN H. BENFORD AND MARION NAMENWIRTH. Precocious Appearance of the Gray Crescent in Heat-Shocked Axolotl Eggs.....	172
BRYAN P. TOOLE AND ALLEN W. SCHUETZ. Evidence for Metabolism of 1-Methyladenine during Induction of Starfish Oocyte Maturation <i>in Vitro</i>	177
M. KLAUS AND R. P. GEORGE. Microdissection of Developmental Stages of the Cellular Slime Mold, <i>Dictyostelium discoideum</i> , Using a Ruby Laser.....	183
Erratum	189

Features

News, Opinion and Letters.....	f-1
Current Literature.....	f-4
Editor's Index.....	f-13

NUMBER 2, AUGUST 1974

Full Papers

CHRISTIAN THOMAS. RNA Metabolism in Previtellogenic Oocytes of <i>Xenopus laevis</i>	191
JAMES D. PROCUNIER AND JOHN H. WILLIAMSON. Temperature-Sensitive Bobbed Mutants in <i>Drosophila melanogaster</i>	198
JANE OVERTON. Selective Formation of Desmosomes in Chick Cell Reaggregates...	210
F. ARTHUR McMORRIS AND F. H. RUDDLE. Expression of Neuronal Phenotypes in Neuroblastoma Cell Hybrids.....	226
JAMES W. TRUMAN, LYNN M. RIDDIFORD, AND LOUIS SAFRANEK. Temporal Patterns of Response to Ecdysone and Juvenile Hormone in the Epidermis of the Tobacco Hornworm, <i>Manduca sexta</i>	247
BRUCE M. CARLSON. Morphogenetic Interactions between Rotated Skin Cuffs and Underlying Stump Tissues in Regenerating Axolotl Forelimbs.....	263
M. OKADA, I. A. KLEINMAN, AND H. A. SCHNEIDERMAN. Chimeric <i>Drosophila</i> Adults Produced by Transplantation of Nuclei into Specific Regions of Fertilized Eggs...	286
MASANOBU SUGIMOTO, KIMIKO TAJIMA, ASATO KOJIMA, AND HIROYOSHI ENDO. Differential Acceleration by Hydrocortisone of the Accumulation of Epidermal Structural Proteins in the Chick Embryonic Skin Growing in a Chemically Defined Medium.....	295
DAVID W. BORST, WALTER E. BOLLENBACHER, JOHN D. O'CONNOR, DAVID S. KING, AND JAMES W. FRISTOM. Ecdysone Levels during Metamorphosis of <i>Drosophila melanogaster</i>	308

Brief Notes

RUBEN ADLER AND GLADYS TEITELMAN. Aggregates Formed by Mixtures of Embryonic Neural Cells: Activity of Enzymes of the Cholinergic System.....	317
R. PHILLIPS AND J. G. TORREY. DNA Levels in Differentiating Tracheary Elements.....	322
K. SHIGENOBU AND N. SPERELAKIS. Failure of Development of Fast Na ⁺ Channels during Organ Culture of Young Embryonic Chick Hearts.....	326
WILLIAM R. JEFFERY AND HAROLD P. RUSCH. Induction of Somatic Fusion and Heterokaryosis in Two Incompatible Strains of <i>Physarum Polycephalum</i>	331
MASATOSHI TAKEICHI AND T. S. OKADA. Alteration of Distribution Patterns of Cultured Cells on the Substrate by Divalent Cations.....	336

WALTER NAGL. Mitotic Cycle Time in Perennial and Annual Plants with Various Amounts of DNA and Heterochromatin.....	342
<i>Author Index</i>	347
Subject Index for Volume 39 will appear in the December 1974 issue as part of a cumulative index for the year 1974

Editor's Index.....	f-24

Information for Authors

Developmental Biology will publish in English original papers bearing on problems of development in the broadest sense; it will contain papers dealing with embryonic and postembryonic development, growth, regeneration, and tissue repair both of plants and animals. Papers dealing with reproductive biology and biology of aging that reveal fundamental mechanisms of general interest will also be published. The journal serves as a meeting ground for studies on development that employ techniques from a wide range of disciplines, e.g., biochemistry, biophysics, cytology, experimental morphogenesis, teratology, genetics, immunology, microbiology, pathology, pharmacology and physiology. The journal aims for rapid publication; currently, publication time is 4–5 months from date of acceptance.

Articles should not exceed 15,000 words and should be accompanied by an abstract that gives, in 200 words or less, a synopsis of the work, including methods and results. *Brief notes* are 2500 words or less including the bibliography, which should contain only 12 references unless the abbreviated reference format is used (see directions under references). The conventional format is: abstract, introduction, methods and materials, results, and discussion, but authors are encouraged to present their material in the most logical and appropriate form.

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the author's name and address.

Line drawings should be made with India ink on smooth white paper. Do not submit original line drawings larger in size than $13 \times 10''$; instead enclose smaller high quality prints for the printer and for editorial use (two copies). Be sure lettering is uniform and large enough to allow for reduction and that the drawings when reduced will be either column ($2\frac{5}{8}''$) or page ($5\frac{1}{2}''$) width. A figure that is submitted $5\frac{1}{4}''$ wide with lettering 3 mm high when reduced 50% will be a single column width. A figure submitted $11''$ wide with lettering 3 mm high when reduced 50% will be full page width.

Photographs submitted for publication must be the actual size for reproduction and carefully labeled with letters 2–4 mm high. The page size of the journal must be considered and the following format observed.

- (1) Column width figures are to be no wider than $2\frac{5}{8}''$ or longer than $8''$.
- (2) Page size figures should be $5\frac{1}{2}''$ wide and no longer than $8''$.
- (3) If the author decides to bleed the page (no margins), figure numbers should be no closer than $\frac{3}{4}''$ to the margin to allow for trimming during binding of the journal. Figures to be bled must be $6\frac{7}{8} \times 10''$ (submitted at $7 \times 10\frac{1}{4}''$ to allow trimming). Use unmounted figures where possible, but when several appear together as one plate, mount them on cardboard or paper as close together as possible. The engraver will tool thin white lines between figures. Give magnification in the legend or indicate with a μ marker on the photograph. The author will defray the expense of colored plates. Two pages of half-tone figures per article will be published without cost to the author; a charge of \$50 per page will be required for pages in excess of this number.

Tables should be used to condense data referred to in the text. They should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text, and collected at the end of the manuscript. Give each table a concise, descriptive heading. Tables should be so composed that the content can be grasped without reference to the text.

References to the literature may be cited in one of the following forms: Doe (1965) has observed that . . . ; (Doe, 1955; Doe *et al.*, 1960); Doe 1961, p. 250). Use suffixes a, b,

etc. following the date to distinguish two or more works by the same author(s) in the same year (Doe, 1960a, b). Alternatively, references may be referred to by number: Doe (1) has observed that . . . (see also 5, 10, 16). Arrange literature citations in the bibliography alphabetically according to the surname of the author, using the following order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Abbreviate titles of journals in accord with Chemical Abstracts' Service Source Index. Number the references only if they are referred to by number in the text. For a brief note with more than twelve references, references in the text must be cited by number and titles omitted in the bibliography section. The same short form may be used with a full paper when an excessive number of references are quoted.

Galley proof should be read carefully as no page proof will be sent to authors. Be certain figures are the correct size and correctly reproduced either as halftones or line drawings and avoid excessive text changes that involve resetting. Reprints may be ordered when galley proof is returned. Fifty reprints are supplied gratis.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. They must be typewritten, double-spaced, on one side of white bond paper about $8\frac{1}{2} \times 11''$ in size, with the pages numbered consecutively. Indicate the address for galley proof. Include with full length articles a running headline not exceeding 35 letters and spaces. Use footnotes sparingly, if at all. Cite them, using superscript numbers, in consecutive order in the text and type them consecutively on a separate sheet. Acknowledgments and figure legends should also be typed, double-spaced, as separate sections. Two copies of the manuscript (original and carbon) and two copies of the figures should be mailed to Dr. Elizabeth D. Hay, Department of Anatomy, Harvard Medical School, Boston, Massachusetts 02115.
